The world's first bendable and weldable wear plate was created.

The rapid acceptance of Hardox® was catalyzed by Lennart Bergqvist and other dedicated SSAB people preaching about its virtues and applications.

Promoted by the former Swedish heavyweight boxing champion Ingemar Johansson, Hardox® was introduced in 1983 as the brand name for SSAB's tough wear plates with a campaign spearheaded by the new product.

Claes Löwgren, one of many Hardox® ambassadors, decided to get to the bottom of wear. His paper "About wear" has helped users everywhere to select the right Hardox® for every application.

Hardox® delivers extreme performance from XS to XL. With the introduction of a new rolling mill in Borlänge, Sweden, the thickness range is widened to offer wear plates from 0.7 mm up to 160 mm.

With high pressure, water-cooling and the right steel you are well on your way to Hardox®. It just needs another vital ingredient: our many years of knowledge and experience in making wear plates both hard and tough.

You can spot Hardox® from a distance, thanks to its red rust-resistant primer. As you get closer, any doubt about the plate’s origin vanishes when you see its identity repeated over and over on the surface.

What is wear, really? Claes Löwgren, one of many Hardox® ambassadors, decided to get to the bottom of wear. His paper "About wear" has helped users everywhere to select the right Hardox® for every application.

AS HARDOX TURNS 40, IT’S HARDER AND TOUGHER THAN EVER

We intend to keep it that way—always ahead of the competition

In the 1970s, producing bendable wear plates was a ‘mission impossible’ in most steel producer’s minds. Some people at the Swedish steel manufacturer SSAB thought differently and decided to attack the issue head on. After a fair share of trial and error, out came Hardox with a unique combination of hardness and toughness. Since the introduction in 1974, the Hardox range has grown into thinner, thicker and harder qualities without sacrificing the all-important toughness. Originally intended as a wear plate, Hardox is tough enough to double as a load carrying part in many applications. It allows for the design of structures that are wear resistant, strong and lightweight at the same time. Don’t just take our word for it. Ask any user and you will learn how Hardox delivers extreme performance for their extreme challenges.

40 YEARS OF EVOLUTION

The hardness of Hardox has been steadily increasing during the years, without sacrificing the necessary toughness. For example, 6.5 mm of our hardest quality has the same service life as 80 mm mild steel in similar wear conditions.

40 YEARS OF INNOVATION

Hardox delivers a unique combination of hardness and toughness. This opens new and innovative ways for our customers to design products that offer extreme performance, higher payloads and less energy consumption.

40 YEARS OF SUPPORT

Support for applications and workshop procedures has always been a part of Hardox. Our people in the Tech Support teams and at the Knowledge Service Center help you to get the best Hardox solution for your particular application.

Don’t just take our word for it. Ask any user and you will learn how Hardox delivers extreme performance for their extreme challenges.
