

CONCRETE PUMPS

Combine the lowest possible weight and highest possible yield with Strenx® high-strength steels in concrete pump booms. Design every boom to maintain structural integrity in critical areas without using excess steel.

Using a concrete pump truck helps to save plenty of time and labor when placing concrete where it's needed in hard-to-reach areas. Truck-mounted concrete pumps can have long booms reaching over 30 meters or more.

With Strenx® 900, for example, you can reduce the boom weight without reducing capacity. This means you can manufacture a longer boom that has the same weight, improving the reach.
